A
23. (Amended) A system as recited in claim 14, wherein said server controls the telemedicine signals to effect release of a chemical or drug into the client using an implanted device.

24. (Amended) A system as recited in claim 20, wherein said server manages therapeutic interventions performed via cyberspace telemedicine signals over the network and wherein said server controls the telemedicine signals to effect release of a chemical or drug into the client by means of an implanted device.

A⁴
29. (Amended) A server for an electronic inquiry-based information system, intended for use with a computer connected to the server over a network, the server comprising:

a network connection to connect to the network and to provide a communication path with the computer;

a user interface to present information over the network to a user at the home computer, and to accept an inquiry over the network from the user at the home computer;

a system for determining a level of service access for the user;

a system for determining a level of sophistication of the user;

a system for providing the user with progressively greater degrees of interaction at respective levels of service;

a search processor to create search requests used to acquire information requested in the user inquiry;

a system for providing a selection of professionals to the user and for creating a team from the selection of professionals for treating a health-related issue of the user; and

a communication system for directing the user inquiry to the team of professionals.

30. (Amended) A method of providing one or more of medical, veterinary, and other health care information on subjects of interest to a user, the method comprising:

determining a desired level of service access for the user;

accepting an inquiry from the user;

composing a search request based on the user inquiry;

searching a database, using the search request, in order to identify information requested in the user inquiry;

providing the search results to the user;

accepting a follow-up inquiry from the user which entails providing a higher level of service access; and

allowing the user to request a consultation with a health care professional and, if desired by the user, providing the user with a list of possible health care professionals.

Please add the following new claim 37:

AB 37. A system as recited in claim 14, wherein a client receives a requested list of ongoing clinical research trials pertaining to the management of a specific disease in a specific geographic region.
